

Player profile picture

Players can have their own profile picture composed by a character portrait and a frame of their choosing

Intention : Make the player feel home when playing by giving them a customizable avatar to represent them publicly + make them boast on social media with special frames

Player interest : profile customization to have a more unique look

Ref(s) : *Guardian Tales, Crusader's Quest*

- Will be used to represent each player publicly when using social features
- Will have default settings (Main character icon + basic frame) so it is not mandatory for players who don't want to invest in the social aspect of the game
- Can be edited in the Player ID Card by tapping it
 - Editor is composed of 2 overlay catalogs (like Character Customization) that appear next to the profile picture, one for character portraits and one for frames
 - Tapping an element in a catalog will display it on the profile picture
 - Leaving the catalog by tapping elsewhere saves the profile picture with its current settings
- Character portraits unlock as player recruit crewmates
- Frames can be given as special rewards for progression and future events
- Several basic frames are available from the beginning (3~5)

Example : Character + frame (*Valkyrie Connect*)
